

About Princess Bot

ce8bad86a34601b96df997251933fef2.png

Princess Bot is the core control bot in use on CCC's servers. It performs a number of important tasks to maintain and manage the server.

What is Princess Bot?

Princess is an instance of [Red Discord Bot](#) an open source bot. It runs currently under docker on a box located at Underestimated's House.

How does Princess Bot Work?

Princess bot uses plug in functions called 'Cogs' to provide different functions and tools. It has fun and utility functions all in the same place.

We interact with the bot primarily via ! commands, which tell the bot we're talking to it specifically. However some functions also use / commands, which also give you a little guide when writing them, so that you know you're giving it the info it needs.

What does CCC use the Princess Bot for?

We use it for many things but in short we have

Utility:

- [Ticketing and Support Requests \(Including feedback and Question of the Day\)](#)
- [Welcome channel cleanup \(Autodeletes messages\)](#)
- [Seen Tracking and User Presence checking](#)
- [Reminder Management and Automatic Notifications](#)
- Temp Roles
- Channel Cleaner
- Birthday Roles and Announcer (*not enabled yet*)

Useful:

- Website Down Checking
- Embed Creator
- Emoji Stealer and Uploader
- Custom Commands and Responses
- Automatic Reactions

- Mention Checker
- Unit Converters
- Button Polls

Fun:

- Starboard
- Bot Says Game
- Citation Generator
- Hangman
- Monopoly
- Performative Reactions
- Plant Tycoon
- Tic-Tac-Toe
- Wordle

Potential Planned Future Functions:

- Automod Replacement (Still working that out)
- Mod Sanctioning System (Replacing Dyno)
- Welcomer (Swapping from Dyno)
- Mod logger and Activity Tracker (Replacing Dyno)

How do I check if the bot is working OK? (Mods)

The bot is reliant on a steady internet connection at Under's location right now, this may change in the future but to keep costs down we're running it on existing hardware. If the bot is offline there may be a connection problem. Firstly if you can visit this site, the server is running OK, this runs on the same box. If the bot is offline and this site is reachable ping [@Underestimated37](#) to let him know, and he'll check. You can also issue the command `!uptime` to get a message telling you how long the bot's been awake. Note that while you can run some commands in a DM with the bot, some server specific stuff needs you to run the command from on the server. Mods can use the `#bot-spam` channel for admin commands, and regular members have the `#poke-the-bot` channel for public safe commands.
